Although I have not read the bill in question (HR4026), I do benefit from the Washington DC weather reports and would like to see them continue. I see no conflict between XM and the NAB broadcasting similar information and I truly believe this is an attempt by NAB to retain some of the market share that is being slowly eroded by a superior product, XM radio. The erosion I speak of can be directly blamed on the NAB themselves. The public radio waves have become so laden with commercials and nonsense, that getting an "up-to-date" weather report, or simply listening to a good song has become a difficult prospect, at best. The whole reason that I made the move to XM is the fact that it is largely commercial free, along with the quality and diversity of programming. Please, ignore the well-funded attempt by the NAB to stifle the competition via congressional manipulation. Don't the gentlemen of our great Congress have more important and genuine issues to be concerned! with?
